IMPORTANT - Please read this leaflet before applying SmartWater®.
How to apply SmartWater

- Ensure that all the areas you code are clean and dry. Brush off excess dirt and dust.
- Shake the bottle / dispenser for at least 30 seconds before use. During use, shake the bottle again every 15 minutes.
- Using the applicator provided, simply apply a small dab to rough areas and surfaces that are unlikely to be on view, handled regularly or walked on.
- When marking a lead roof or flashing it is always best to mark the underside of the lead but where this is not possible, mark edges and rough surfaces. Always mark in a continuous line.
- When marking copper pipework, apply to joins and other inconspicuous areas.
- When coding electrical equipment, make sure it is switched off at the mains before applying SmartWater. After applying, allow at least one hour before re-connecting the power supply.
- Code each part of an item that is comprised of a number of components.
- Only work in areas which are well ventilated.
- Wash the applicator immediately if it becomes dirty to prevent contaminating the solution.
- Check your SmartWater has not expired by referring to the use by date on the bottle.

Health & Safety

General
- Please keep SmartWater out of reach of children.
- Please clean up all spillages immediately.
- Although non-hazardous, SmartWater will tend to stick to surfaces so gloves and eye protection are recommended.

First Aid
- If SmartWater comes into contact with your eyes, rinse them with plenty of water for at least 15 minutes.
- If SmartWater comes into contact with your skin, immediately wash the area with soap and water.
- If you swallow SmartWater, wash out your mouth with water and consult your doctor if any symptoms develop.
Where to apply SmartWater

- The best surfaces to mark are those not on display, which are uneven or irregular e.g. indents, slots and grills.
- Although SmartWater is barely visible it can leave a slight sheen when dry. If you have any concerns, please test SmartWater on an inconspicuous area or another similar surface beforehand.
- If the Police require an evidential sample, there is a risk of a slight mark.
- Avoid surfaces that are flat and shiny where possible.
- Avoid surfaces exposed to direct sunlight or rain, and parts of equipment that are normally handled. If this is unavoidable, it may be necessary to re-apply occasionally to maintain protection.

A few don’ts & after use

- Don’t dilute the SmartWater solution.
- Don’t apply to working, moving or functional parts.
- Don’t store or use it in extreme hot or cold temperatures.
- Don’t try and write with the solution.
- Don’t apply to items when connected to the mains.
- Don’t apply to outside surfaces if rain is expected within 4 hours of application.

After Use:
- Clean the applicator in clean, warm water.
- Wipe the thread of the bottle with a clean, damp cloth or paper towel.
SmartWater will not accept liability for any damage to property if the Application Guide is not fully observed and complied with. If you have any questions regarding the application of SmartWater, please contact us first.
