FLY-TIPPED WASTE CAN BE TRACED

The strategic use of SmartWater® can help to identify criminals responsible for fly-tipping and other environmental crimes that plight the UK’s landscape.

HOW DOES THIS WORK?
To avoid fly-tipping of domestic and commercial waste, marking the waste with SmartWater ensures it can be forensically traced back to the vehicle that carried the waste, when it is subsequently dumped.

WHO IS USING SMARTWATER?
Police, Local Authorities and Environmental Agencies use SmartWater to prove ownership of property and convict criminals. If your waste is fly-tipped, the Police can prove who it belongs to, where it came from, and who was charged with its disposal.

FLY-TIPPING IS AN ENVIRONMENTAL CRIME?
Criminals can face fines of up to £50,000 and up to 5 years in prison. Vehicles can be seized and driving licences can be taken away.

WHO IS LOOKING FOR SMARTWATER?
Police Forces and Environmental Agencies throughout the UK are trained in the detection of SmartWater and are actively searching for it as part of routine Police procedure.
